STATUS OF THE SPANISH INVENTORY OF PGR

- LUCÍA DE LA ROSA
- INIA PLANT GENETIC RESOURCES CENTER
- Alcalá de Henares (Madrid) Spain

IPK. GATERSLEBEN, OCT 2018

Contents

- National Program for PGRAF in Spain
- Plant Genetic Resources Network
- National Inventory overview
- Documentation system
- Characterization and Evaluation data
- New tool

The National Institute for Agricultural and Food Research and Technology

Public Research Organizations (1/7). It belongs to the Ministry of Science, Innovation and Universities

- Only PRO dedicated exclusively to agrifood and forestry research.
- Responsibilities
 - As manager of project focus on agricultural and agrifood research until the middle of 2017. Since them, this responsibility have changed to the AEI (Research State Agency)
 - As research institution in these areas
 - Support of PGR Network

LAW 30/2006 OF SEEDS, NURSERY PLANTS AND PLANT GENETIC RESOURCES

Regulates the conditions of conservation and sustainable use of plant genetic resources

Art. 46 – Access to PGR

Art. 47 – PGR recipients' obligations

Art. 48 - Conservation and Utilization of Plant Genetic Resources Program

Art 49 - National gene banks' network

Art 50 - National Plant Genetic Resources Center (CRF)

Art 51 – Farmers' Rights

Royal Decree 199/2017 approving the National Program of Conservation and Sustainable Use of Plant Genetic Resources for Agriculture and Food Regulation

Conservation and Utilization of Plant Genetic Resources National Program

Main objectives

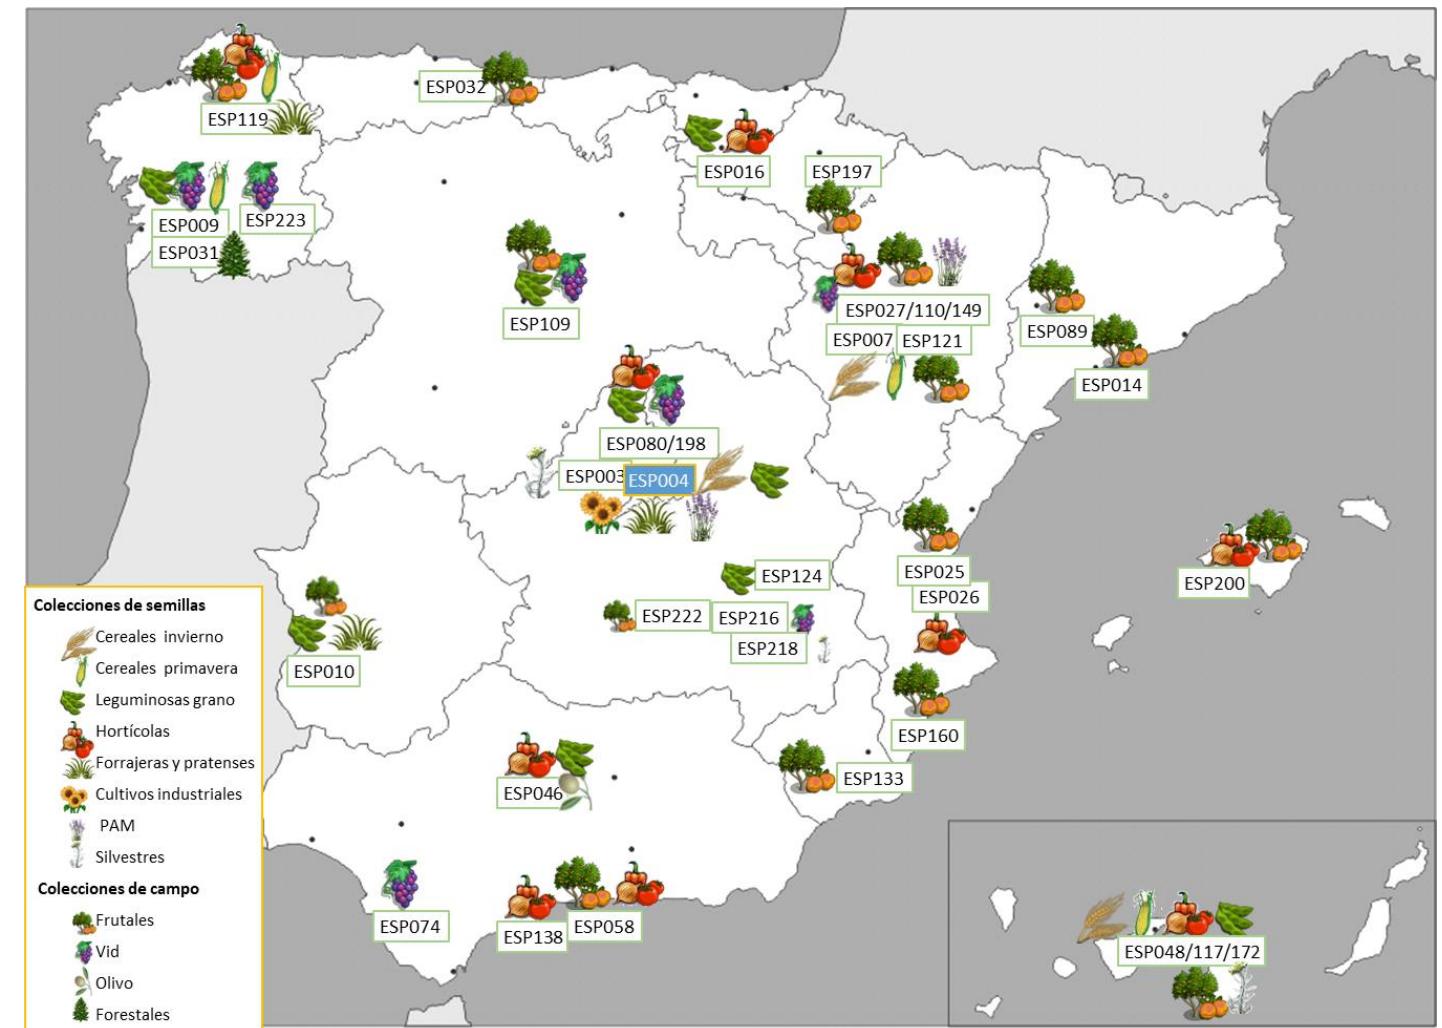

- To ensure the long-term conservation of plant genetic resources on a viable scientific and economic basis
- To guarantee the viability and good sanitary status of the collections
- To optimize the use of institutional, human and financial resources and encourage the participation of the different Administrations
- To improve the competitiveness of the agricultural sector, establish synergies between national sectors and promote international cooperation

Spanish PGRAF *ex situ* conservation Network

It is composed by 35 gene banks that conserve *ex situ* **76.753 accessions** as seeds and in field collections. The 35 institutions have signed an formal agreement to be included in the Network

It is responsible to keep Spanish active collections properly conserved, documented and available to potential users.

Seed collections must have a security duplicate in the National Plant Genetic Resources Center

CRF Main activities areas

Mission: Contributing to the conservation and sustainable utilization of Plant Genetic Resources

Objectives:

- Conservation of **seed duplicates** of the National gene bank national network (base collection)
- Conservation and characterization of **active collections**:
 - Cereals, grain legumes, some industrial crops
 - Aromatic and medicinal species
 - Rose bushes and poplar field collections
- **Management and publication of the National Inventory of the National Network**
- Coordination of the **National gene banks' network**
- Coordination of international activities

National Inventory

- The CRF manages and periodically updates the National Inventory, which includes the **passport data** of the accessions held in the Collections of the gene banks' national network
- Since 2000, the CRF has been publishing all this information on INIA's web page
- Each accession is identified by a catalogue number (NC) which is unique and non-transferable even if the same material is conserved in more than one collection

Repeated information?

2. Taxonomy

- Scientific names are checked using USDA GRIN taxonomy for Plants and local flora (Flora Iberica, Flora Europaea)
- The SI includes accessions belong to 715 genera and 3,486 species
- The 20 species with more accessions account the 54,8% the total number of accession included in the SIN
- The 60 species with more accessions account the 78,8% the total number of conserved accessions

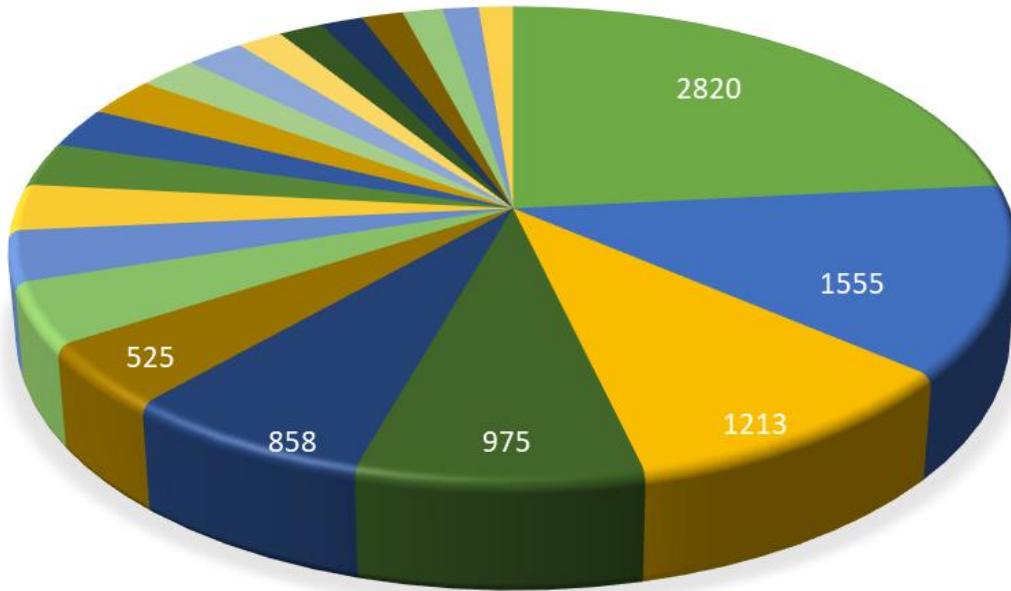

Taxonomy data set:

Botanical family
Genus

Introduction

Passport Data

Characterization Data

Bibliography

The rational conservation of plant genetic resources starts with the study of the existing diversity and the consistent arrangement of the associated data. The availability and dissemination of germplasm-related information facilitates the access, management and use of plant genetic resources. These aspects are fully reflected in the FAO's [Second Global Plan of Action](#) for plant genetic resources for food and agriculture, of which one priority activity area calls for the *Construction and strengthening of comprehensive information systems for plant genetic resources for food and agriculture*.

In Spain, the National Program for the Conservation and Use of Plant Genetic Resources, established through a Ministerial Order on 23 April 1993 (Official State Bulletin 7 May), as well as the Action Plans approved to date, include among their priority areas the development of an Inventory of the *ex situ* collections of the National Network.

Since 1994, the National Plant Genetic Resource Center (CRF), as part of its work as documentation hub of the plant genetic resources conserved in the National Network, develops, publishes and keeps updated the National Inventory of the collections participating in the Program.

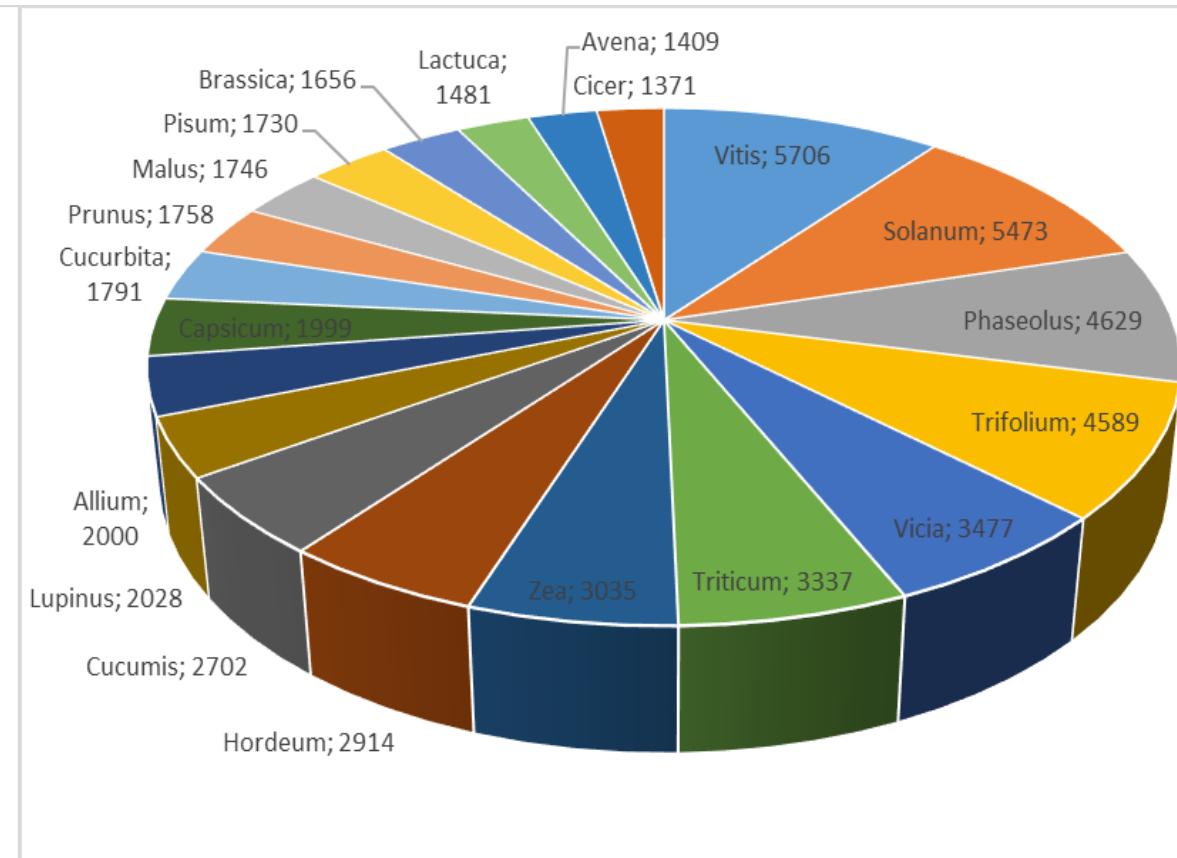

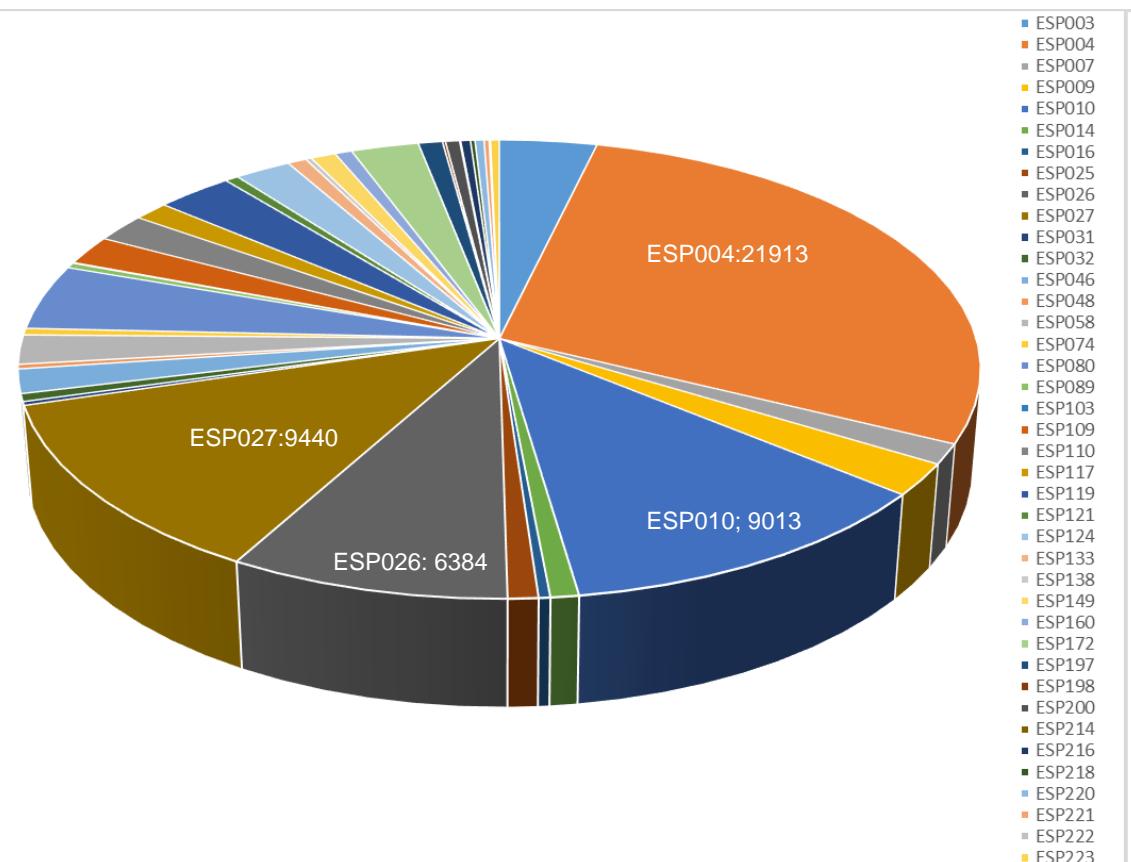

In this website you can search through the passport data of all materials conserved in the Network of collections and find the contact information of the responsible institutions.

Characterization and evaluation data

- There are a lot of characterization data all over the total Network
- There are collection without data or with not easily accessible data
- One of the problems is the lack of a common “site” where all the information would be easily accessible

Resultados de la búsqueda de los datos de Pasaporte/Caracterización de *Lens culinaris Medik.*

La consulta realizada fue:

Todas las entradas

Registros 1 a 10 de 230 que coinciden con la consulta.

Caracterización y Evaluación de: [BGE000762 \(*Lens culinaris Medik.*\)](#)

Lugar: [ESP004](#)

Latitud: 403059N

Longitud: 0031941W

Altitud: 600

Persona responsable: L. de la Rosa

Fecha: 1987-1988

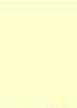

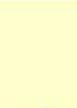

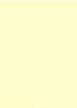

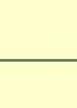

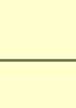

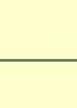

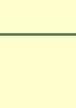

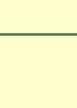

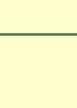

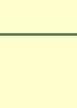

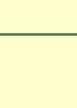

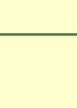

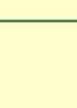

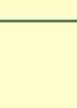

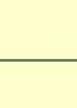

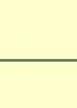

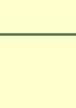

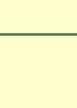

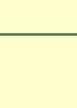

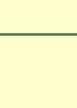

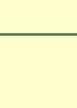

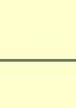

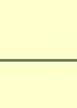

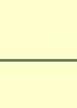

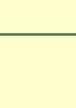

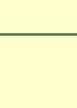

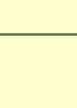

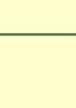

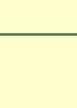

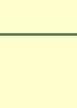

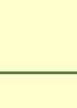

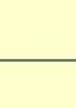

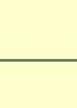

Datos de la Recolección

Descriptor	Descripción	Valor
FECSIE	Fecha de siembra (AAAAMMDD)	19871111
DPFLO	Días a primera flor	
DFLO	Días al 50% de floración	186
DMAD	Días a maduración	232
PALT	Altura de la planta (cm)	54,35
VALT	Altura hasta primera vaina (cm)	33,4
PPIG	Pigmentación de la planta	2
FPED	Número de flores por pedúnculo	2,8
FCOL	Color del estandarte	2
SVAI	Número de semillas por vaina	1,9
VPIG	Pigmentación de la vaina	1
P100S	Peso de 100 semillas (g)	2.23
